PROFESSIONAL SUMMARY

Results-driven Software Engineer with 3.5+ years of experience designing and delivering enterprise-grade, cloud-native applications. Deep expertise in C#/.NET Core, Azure, Docker, and React — with a strong track record of building scalable microservices, RESTful APIs, and asynchronous messaging pipelines using RabbitMQ and Redis. Hands-on experience containerising full service stacks (Redis, RabbitMQ, MSSQL, Azurite) with Docker Compose. Proven ability to ship production features across international client environments (UK, Sweden, Denmark) within Agile/Scrum teams.

TECHNICAL SKILLS

Languages: C#, JavaScript, HTML, CSS

Backend: .NET Core, Entity Framework Core, Node.js, Express.js, REST APIs, Microservices

Frontend: React.js, Next.js, Vue.js, Redux, Tailwind CSS

Containerisation: Docker, Docker Compose (Redis, RabbitMQ, MSSQL, Azurite)

Cloud & DevOps: Azure Functions, Azure Blob Storage (Azurite), Application Insights, CI/CD

Databases: SQL Server (MSSQL), MongoDB (Mongoose), Redis

Messaging: RabbitMQ (async event-driven architecture)

Architecture & Patterns: Microservices, CQRS, Repository Pattern, Result Pattern, Dependency Injection

Security: JWT Authentication, Secure REST API Design

Performance: Redis Caching, API Optimisation, LINQ Query Optimisation

Tools & Platforms: Git, GitHub, Jira, Trello, Postman, Visual Studio, VS Code, NPM

Methodologies: Agile/Scrum, CI/CD, Monorepo (TurboRepo), PayloadCMS

PROFESSIONAL EXPERIENCE

Software Engineer — Codinova Technologies

Dec 2023 – Present | Noida, India

- Worked directly as a client-facing engineer across all projects, collaborating with international stakeholders (UK, Sweden, Denmark) to gather requirements, communicate progress, and deliver production-grade solutions end-to-end.
- Architected and maintained the large-scale Planday ↔ Zenegy integration using .NET Core Microservices, REST APIs, Entity Framework, Azure Functions, RabbitMQ, and Redis — implementing CQRS, Repository Pattern, Result Pattern, JWT Authentication, Dependency Injection, and async programming to enable reliable bi-directional sync for 10,000+ employee records, reducing sync latency by ~40%.
- Applied advanced LINQ queries and API Optimisation techniques to reduce database round trips by ~35% and improve overall system throughput; integrated CI/CD pipelines for automated build and deployment to Azure.
- Containerised the full local development stack (Redis, RabbitMQ, MSSQL, Azurite) with Docker Compose, cutting new-developer onboarding time from 2 days to under 2 hours and eliminating environment-parity issues across the team.
- Developed scalable CMS backend services and optimised frontend workflows for Iknow (Sweden) using .NET Core and Vue.js, improving content publishing throughput by 30%.
- Built high-performance, responsive web applications for Holibob (UK travel platform) using React.js and Node.js/Express, contributing to a 25% improvement in page load times and boosting user engagement metrics.
- Designed and contributed to a monorepo-based system (SYU project) using TurboRepo, Next.js, Tailwind CSS, PayloadCMS, and MongoDB, delivering a scalable multi-tenant content management solution shipped to production within 3 months.

- Designed and implemented highly interactive, responsive UIs using React.js; improved component reusability, cutting front-end development effort by ~20% across projects.
- Built server-side REST APIs with Node.js and Express.js backed by MongoDB; applied indexing and query optimisation strategies that reduced average API response times by 35%.
- Integrated Docker for local MongoDB containerisation, standardising development environments and enabling consistent data seeding across team members.
- Adopted Tailwind CSS and Material UI design system, accelerating UI delivery and ensuring design consistency across 4+ client-facing applications.

KEY PROJECTS

Planday-Zenegy Integration (Enterprise SaaS) - Client-Facing *[.NET Core · Microservices · REST APIs · Docker Compose · RabbitMQ · Redis · SQL Server · Azure Functions · JWT Auth · CQRS · Repository Pattern · Result Pattern · Dependency Injection · LINQ · Async Programming · Git · CI/CD · API Optimisation · Azurite]*

Real-time employee data sync between two Danish SaaS platforms serving 10,000+ records. Designed async event queues via RabbitMQ, applied CQRS + Repository Pattern for clean separation of concerns, enforced JWT Authentication for secure API access, and used Redis for distributed caching. Containerised all dependent services (RabbitMQ, Redis, MSSQL, Azurite) with Docker Compose for full local-to-Azure parity.

Holibob Travel Platform (UK) *[React.js · Node.js · Express.js · MongoDB · Docker]*

Full-stack web application for a UK travel marketplace. Delivered responsive booking flows, integrated third-party APIs, and containerised the MongoDB service with Docker for a reproducible dev/staging environment.

SYU – Monorepo Content Platform *[Next.js · TurboRepo · PayloadCMS · MongoDB · Tailwind CSS]*

Multi-tenant CMS platform built in a TurboRepo monorepo. Responsible for architecture, shared component library, and PayloadCMS integration.

Iknow CMS (Sweden) *[.NET Core · Entity Framework Core · Vue.js · SQL Server]*

Backend services and admin CMS for a Swedish knowledge-sharing platform. Optimised EF Core queries to cut database round trips, enforced JWT Authentication for secure API access, and used Redis for distributed caching and improved Vue.js frontend rendering performance.

EDUCATION

Bachelor of Technology (B.Tech) — Maharshi Dayanand University, Haryana, IN

Aug 2019 – May 2023

Class 12th — CBSE Board — Holy Convent Sr. Sec. School, IN

Completed 2019
